

Resco toolkit for building mobile apps

A no-code toolkit for building responsive and resilient mobile business applications for Microsoft Power Platform, Dynamics 365, Dataverse and Salesforce.

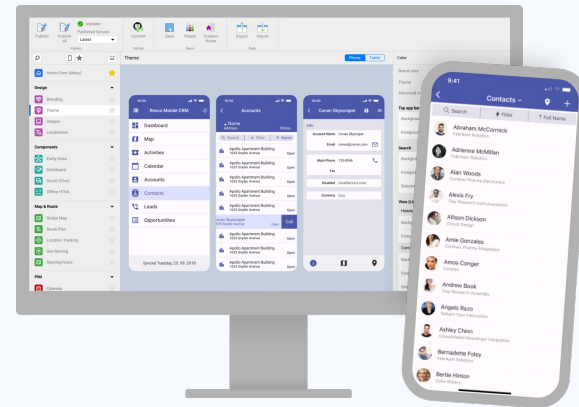

resco

Why choose Mobile App Development Toolkit?

Rapid app building from start to finish

Deploying mobile apps with Resco takes days, not months—all without writing a single line of code. Workers can download the Resco app from AppStore, Google Play, or Windows Store, log into your company environment, and instantly use the app you have published, on any device.

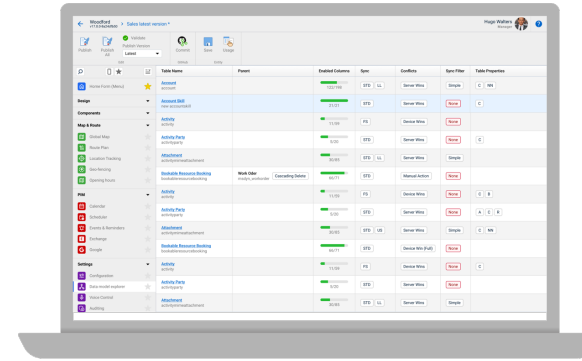

Fast and responsive apps that work in any conditions, including offline

Having all the required data available locally means swift operation with zero waiting times – all while ensuring the highest levels of data security and encryption. Resco apps have a unique sync engine that makes them reliable in any condition. You can count on uninterrupted availability in areas with a slow internet connection, and even offline. This makes the apps incredibly useful for workers on the go: salesmen, field technicians, carers visiting their clients, and more.

Complex projects without compromising on performance

The apps handle large data sets and robust business logic without compromising performance. They are a great fit for organizations with a large workforce, complex data structures, and lengthy processes conducted on the apps.

No maintenance required

Resco takes care of keeping the application updated to ensure compatibility with the latest technology innovations, devices, and operating system versions, saving you costs and effort.

Exceptional support

Everyone promises great support, but at Resco we truly deliver. Our support, development and knowledge team share a workspace. We have a proven track record of providing first class support to our partners and customers and incorporating feature requests into our roadmap.

Build your app in 6 easy steps

Create a complex custom project or develop a solution for an industry vertical.

1. Create mobile app data model
2. Design views and forms
3. Add components
4. Set up business logic
5. Theme your app
6. Get the app ready for users

ALECTRIS

“Reporting from our field engineers was never that easy. Now with Resco, the process is more efficient and less time-consuming. We can assess the information sent back to the office much faster, which leads to faster decision-making. We all know that time reaction plays a key role in our business. Reporting to end customers has also been improved, as we can easily pass them all information from the field, saving us an enormous amount of time and helps us build a bond of trust with them.”

Anastasios Agathaggelou,
Senior O&M Manager, Alectris

Enormous time savings

24/7 access to valuable historical data

Higher efficiency thanks to centralization
