

# Resco Mobile CRM vs. Salesforce Mobile App

Salesforce mobile is built for quick CRM updates. Resco Mobile CRM is built for the field: offline-first, customizable, inspection-ready, and supporting Windows devices.

## Why Resco

### Offline without limits

Work anywhere with the same experience online or offline. Resco runs workflows, automation, and business rules directly on the device: faster, more secure, and always available. It's capable of handling millions of records and complex business logic.

### Customization that fits your business

You can tailor every aspect of the app, including UI, data, and logic. Resco customers typically achieve 90% of functionality using low-code/no-code, while developers can extend capabilities with JavaScript or TypeScript.

### Inspections out of the box

Digitize checklists, audits, and ensure compliance with ready-to-use inspections tools. Take advantage of advanced business logic. Capture photos, signatures, or GPS data. Offline reports are included.

### Native full offline on Windows

Resco Mobile CRM runs on iOS, Android, and also on Windows, making it the perfect fit for rugged hardware in utilities, manufacturing, and government.
